PROFESSIONAL SUMMARY

Backend / Platform Engineer with 2+ years of production Python and Django experience (since Feb 2024). Own the Django REST Framework and PostgreSQL backend of a HIPAA-aligned, multi-tenant healthcare SaaS on AWS (10K-100K requests/day). Led a greenfield authentication and authorization platform from architecture decision records to production (Keycloak with custom Java SPIs, OIDC, SpiceDB ReBAC). Shipped clinical document generation with Celery background jobs and built Terraform, Docker and GitHub Actions infrastructure. Review code for 13 engineers (**230+ pull requests**).

CORE COMPETENCIES

Python, Django & DRF

PostgreSQL & Redis

Celery Background Jobs

REST API Design

Transactional Outbox & Async Workers

AWS, Terraform & Docker

OIDC, Keycloak & ReBAC

Testing & Code Review

WORK EXPERIENCE

House Works Technology

Feb 2025 - Present

Software Development Engineer I

Remote | Promoted from intern, Apr 2025

- Own the backend of a HIPAA-aligned, multi-tenant healthcare SaaS on Django, Django REST Framework, PostgreSQL and AWS at **10K-100K requests/day**. Built its patient management and appointment scheduling REST APIs, ICD-10 coding engine, and AWS Cognito-based authentication.
- Led a greenfield authentication and authorization platform to production on self-hosted Keycloak (OIDC, custom Java SPIs, multi-tenant SSO, IdP federation). Designed its SpiceDB ReBAC model (**16 object types, 45 permissions**) and kept tenant isolation across API and database access.
- Kept the SpiceDB authorization graph consistent with PostgreSQL through a transactional outbox and an async worker. Reconciliation and consistency checks detect and repair authorization drift.
- Hardened identity with mandatory TOTP MFA and instant session revocation (OIDC back-channel logout, Redis denylist). Built per-tenant password policies and an audit-event producer as custom Keycloak SPIs, plus user lifecycle flows that write to an append-only audit ledger.
- Shipped clinical document generation to production: a PDF template manager for clinical notes and facesheets, DOCX-to-PDF conversion, and bulk document export through a PDF microservice. Celery jobs report progress and support cancellation and stale-job cleanup.
- Built production infrastructure as code with Terraform (staging and production workspaces), Docker, AWS EC2, and GitHub Actions CI/CD with automated EC2 deployments. Cut deployment time from **~45 min to ~12 min (~70%)**.
- Review code (**230+ pull requests for 13 engineers** since Jul 2025) and write Pytest unit and integration tests for the Django and DRF backend. Migrated legacy Django views to DRF ViewSets (**~40% less boilerplate**).

Procedure Technologies

Oct 2024 - Feb 2025

Software Development Engineer Trainee

Mumbai, Maharashtra

- Selected for Procedure's "Rubber Duck" developer training cohort. Built full-stack production features with React.js, Next.js, TypeScript, and NestJS, and responsive interfaces with shadcn/ui.
- Containerized services with Docker and provisioned cloud infrastructure with Terraform.

Backend Developer Intern

Nashik, Maharashtra

- Designed REST APIs with Django and MySQL, JWT authentication, and RBAC for a Flutter activity-tracking app. Also designed an admin panel for users, roles, tickets, and activity logs.
- Added ML-powered image search (Eden AI API) to an e-commerce platform, plus email-based password reset and OTP verification (Twilio).

PROJECTS

Fieldnotes: Agentic Job Research System Personal project

Agentic RAG system: a multi-stage planner-executor-synthesizer agent with tool use and embedding-based retrieval. It researches companies, inspects GitHub engineering footprints, and compares resume embeddings against job requirements. It returns structured apply, consider, or skip verdicts with cost and latency observability.

Python, FastAPI, Gemini, Cloudflare BGE, GitHub API

HIPAA Guardian Open Source

AI-agent skill with standalone Python scanners that check source code, data, logs, and API responses for all 18 HIPAA Safe Harbor identifiers. It adds confidence and risk scoring, audit reports, FHIR, HL7, CDA, and X12 support, and CI and pre-commit gates. Built with Python and Claude Code. It works with Claude, Cursor, Windsurf, and other AI coding agents. 6+ GitHub stars, 3 forks.

Python, Claude Code

EDUCATION

B.Tech in Computer Engineering R. C. Patel Institute of Technology

2021 - 2024

Shirpur

CGPA 7.98/10. President, Akatsuki Coding Club (Mar 2023 - Feb 2024).

Diploma in Computer Engineering R. C. Patel Polytechnic

2019 - 2021

Shirpur

93.89%

CERTIFICATIONS

AWS Certified AI Practitioner (AIF-C01)

Amazon Web Services

2026

SKILLS

Languages: Python, SQL, TypeScript, JavaScript (ES6+), Java

Backend: Django, Django REST Framework, FastAPI, NestJS, Node.js (Express), REST API Design

Databases: PostgreSQL, MySQL (relational); MongoDB, DynamoDB (NoSQL); pgvector

Distributed Systems: Transactional Outbox, Async Workers, Idempotency, Reconciliation, Event-Driven Systems

Cloud & DevOps: AWS (EC2, ECS, S3, Lambda, API Gateway, IAM, Cognito, CloudWatch), Terraform, Docker, Git, GitHub Actions, CI/CD, Shell Scripting, Oracle Cloud

Testing & Observability: Pytest, Unit/Integration Testing, Code Review, Agile/Scrum, Sentry, Grafana, ClickHouse, Structured Logging

Healthcare: HIPAA-aligned Systems, EHR Workflows, ICD-10-CM, Modifier Codes, NCCN Guidelines, FHIR and HL7 (working knowledge)

Identity & Security: Keycloak, SpiceDB (ReBAC), OAuth 2.0, OIDC, JWT, SSO, RBAC, AWS Cognito

AI / Voice: Azure Speech, RAG, Embeddings, LLM Orchestration, Prompt Engineering, Agentic AI, Gemini, OpenAI, Claude Code, Claude Skills

Frontend: React.js, Next.js, Tailwind CSS, shadcn/ui
